Subject: Capitol Power: Harvard University's co-gen units in various buildings

Hello, All: I have recently met with Tommy Wells and Jon Kass (and Jim Dougherty, Sierra Club) as the representative of our neighborhood association, against the burning of coal and the high pollution levels at the Capitol Power Plant. As you can see by this attachment, small co-gen units exist and operate today in individual buildings. In other words, CPP does not need an entire plant to be converted, when in fact it can spend far less by ordering/installing individual units in the major Capitol buildings.

Sierra Club attorneys and DDOE attorneys are meeting tomorrow to discuss other alternatives to coal. Here is the attachment: many other similar things exist online, but this one-pager is simply done . Thank you, Jane
